Applicant argues that "the context switching being restricted and constrained to the task level, and not being allowed to occur at other levels, is not really taught in Bronte, which teaches, much like other operating systems, that context switching is allowed at task level, but alos at many other levels." In response, however, it is pointed out in Bronte, col. 10, lines 11-12, that Bronte does teach restricting and constraining to the task level by preventing the nested level ("This prevents the case where calls are nested", col. 10, lines 11-12). Applicant's argument has been fully considered but is not deemed to be persuasive.
